Model A, $a = 0.2$, $q = 0.3$: perturbations $\delta = 0.01$ (RK45, rtol=1e-09)
$x_+ = 0.906$ stable
$x_- = 0.443$ unstable
$x_+ + \delta$
$x_+ - \delta$
$x_- + \delta$
$x_- - \delta$ (hits 0 at $\tau = 2.93$)
population $x = N/K$
time $\tau = rt$
