Synthetic model: r=0.7, K=100, A=20; declared model units
Model A: vary initial population
H=18.4 (0.5 Hc)
H=36.8 (1 Hc)
H=38.6 (1.05 Hc)
H=44.1 (1.2 Hc)
Extinction time [model_time_unit] (log scale)
Initial population [population_unit]
Model A: vary constant catch
N0=10
N0=50
N0=90
Extinction time [model_time_unit] (log scale)
H [population_unit / model_time_unit]
